

Faucet mount type

"Hollow Fiber Membrane Filter" Water Purifier

Standard type

with 1,500 L filtration capacity

torayvino® MK303

Easy-to-use 360° rotational lever

Very smooth 3-step change
(Pure water, Unfiltered
Straight and Unfiltered Spray)

The 4-Stage Filtration

Four-stage filtration catches even the most microscopic contaminants.

1. Pre screen

Removes rust, sediments and bigger particles.

2. Granular activated carbon

Torayvino MK303 uses high performance activated carbon to remove the chlorine smell and residual chlorine from the unfiltered tap water.

3. Second screen

Removes rust, sediments and bigger particles.

4. Multilayer Hollow Fiber membrane filter

Toray's advanced multilayer hollow fiber membrane filters remove rust, bacteria, coliform bacilli, microorganisms and microscopic impurities from water and other liquid solutions without removing calcium, magnesium and other minerals essential to the human body.

The same membrane technology is used in dialyzer to purify Blood in the medical field.

See-through Window

Just remove the filter cap to check contaminants build-up through the See-through Window. So you know when it's time to replace the cartridge.

Before use

After use
(rust)

- Model.....MK303-EG
- Casing materials.....Polyacetal, ABS resin
- Filter materials..... Granular activated carbon, polysulfone hollow fiber membrane
- Initial filtration flow rate 2.0 liters per minute (water pressure: 100kPa)
- Minimum working water pressure 70kPa
- Recommended cartridge use duration About 3 months if 15 liters are used per day

FILTER MADE IN JAPAN

○ Filtration capacity

- Free residual chlorine: total filtration volume 1500 liters, removal rate 80%
- Turbidity: total filtration volume 2000 liters, filtration flow rate 50%
